[Aid4Mail EDiscovery 361 Portable](#)

Aid4Mail EDiscovery 361 Portable

It works fine when I click on some image and it saves it into a png file. How can I get it working with website? I need to click on an image and get it's link. What is the easiest way to do this? What I've done already: I run MINGW on Windows and it is 32 bit compiler (because it's not 64) I've set "MinGW-w64" as the compiler (in OpenCV's folder, its settings, and C:\MinGW) I've added the folder where the EDiscovery is to my PATH I've added C:\MinGW\bin to my PYTHONPATH and I've set PYTHONPATH=C:\MinGW\bin I've added the folder where the files that EDiscovery creates is in my PATH I've added C:\Users\Ilya\opendatadiff\opendatadiff\edication\linux to my PYTHONPATH and I've set PYTHONPATH=C:\Users\Ilya\opendatadiff\opendatadiff\edication\linux I've set the Windows and EDiscovery folders as my desktop, so when I click on an image it saves it there and I can get the URL with the '?' I've got the ImageMagic ImageMagick 7.0.7-9 (Portable) (64-bit) Also I've got a Windows "Desktop" which contains the images I want to work with, and the folder where I have EDiscovery in. I've set: C:\MinGW\bin;C:\Windows\system32;C:\Windows;C:\Windows\system32\Wbem;C:\Windows;C:\Windows\system32\WindowsPowerShell\v1.0;C:\Users\Ilya\opendatadiff\opendatadiff\edication\linux and I have: C:\Users\Ilya\Desktop;%SystemDrive%\Users\Ilya as my: PATH I've got a folder named: c:\MinGW\lib with: libMagick*.dll I tried with this: c:\MinGW\libMagick*.dll;C:\Users 6d1f23a050
