Download SWF® Flow Simulation to Model 2D.Q: Repurposing old pneumatic for bi-directional power with an AC voltmeter I'm looking for a way to recover a little of the compressed air used in a forklift, to power an AC voltmeter. My first thought was to buy a pressure tank and use the accumulator design to create a pneumatic pressure source. Then, a simple voltage regulator would take the generated pressure, and convert it to a voltage output. While this does work, it doesn't convert all of the energy. I've also been thinking that an electric motor might be able to take compressed air, and power an AC voltmeter while reversing. Can anyone provide any input about repurposing pneumatic power systems for new purposes? How do these new systems fail safe? What about the environments used for their systems? Edit: I have to mention that a standard compressor would not be enough in this situation. This is an old forklift. The compresor has been welded shut, and I only need a little compressed air. I have access to an old one. If this isn't possible I have to ask, what else can I do. A: In addition to the others, I think you can use a bio-gas generator to generate an internal pressure source from CO2. High pressure-gradient catheter tip for intra-

Not only was Kendrick ready to hit his stride, but so too was the Cleveland Cavaliers, who had been hit with the first loss of their road trip. At 10-7, Cleveland sits in third place in the Atlantic Division. According to Jeff Caplan of the Athletic, they have two games left at the Quicken Loans Arena — one against the lowly Boston Celtics, one against the Washington Wizards — before rejoining the Cavs home. A new poll from NPD has unearthed potentially troubling news for President Trump. According to a new survey, more than half of Americans think Republicans have been too accommodating toward Trump and his closest allies and aren't holding him accountable enough for his actions. And when asked whether they were more likely to support or oppose a candidate who they viewed as a "traditional Republican" vs. a "far-left Democrat" — 54% of respondents said they were more likely to support the "traditional Republican" candidate, while just 42% said they were more likely to support the "far-left Democrat." This isn't to say that a majority of the country actually wants or needs to see Republicans return to being the old-fashioned, conservative candidates of past. But the results of this survey suggest that a majority of voters do want them to hold Trump accountable for his actions, and that there is a segment of the population that would support candidates who are significantly more traditional in their policy stances than those of the president.
